

WU TIAN

Profile

Phone: +86 18013004634
Email: njutwutian@163.com
Location: Shanghai, China
Years of Experience: 12
Job Target: Technical Lead / Senior Full Stack Architect
Languages: Chinese (native), English (working proficiency)

EDUCATION

Nanjing Tech University – Bachelor's Degree, Computer Science and Technology (2010–2014)

PROFESSIONAL SUMMARY

- Experience in web application design and development.
 - Proven ability to design and deliver distributed, microservices-based systems
 - Excellent communication and presentation skills, comprehensive problem solving abilities
 - Worked in Agile methodology and Scrum environments
 - Multi-language full-stack engineer with 12 years of experience across Java, PHP, C#, JavaScript, Node.js, TypeScript, Lua, and C++
 - Extensive hands-on experience with Microsoft Azure ecosystem (MySQL, Blockchain, Orcas Portal, RDS, VNet, KeyVault).
 - Strong DevOps practice (Jenkins, Docker, Git, CI/CD, Azure Devops)
 - Rich experience in AI programming, with 50% of the output in the past year using AI Vibe coding, covering development, testing, and system operations.
-

TECHNICAL SKILLS

- **Languages:** C#, Java, PHP, JavaScript, Lua, C++, PowerShell
 - **Frameworks:** .NET MVC/Core, Spring Boot, Vue, React, AngularJS, KnockoutJS, JQuery, Entity Framework
 - **Databases:** MySQL, MSSQL, MariaDB, Redis, MongoDB, Elasticsearch
 - **Cloud & DevOps:** Microsoft Azure (MySQL, Blockchain, VNet, KeyVault, Storage, Migrate), Docker, Jenkins, Git, Azure DevOps, CI/CD pipelines, Mocha testing
 - **Architecture:** Microservices, distributed systems, load balancing, high availability
-

WORK EXPERIENCE

Tongcheng Network Technology Co., Ltd. (Feb 2014 – Nov 2015)

Software Developer (Feb 2014 – Nov 2015)

- Trained new employees; implemented backend logic, data cleaning, reporting
- Built APP backend APIs, website and WeChat backend APIs, and full-stack CSM system for business departments

Shanghai Wicresoft Co., Ltd. (Nov 2015 – Now)

Software Developer / Full Stack Engineer (Nov 2015 – Jul 2016) – Early Microsoft Projects

- Microsoft Retail (MS Store RPM): REST APIs, bug tracking, retail data analytics system
- Maintained CRM plugins, job system performance monitoring, fault troubleshooting

Senior Full Stack Engineer (Sep 2016 – Mar 2018) - Microsoft Windows Update Content Management Team

- Led Microsoft Windows KB article update system: refactored into REST API + job service architecture

Senior Full Stack Engineer (Apr 2018 – Jan 2021) - Azure MySQL Team

- Built Azure MySQL portal extension, automated container testing, and PowerBI reliability dashboards.
- Frontend lead for Azure Blockchain Service incubation, bringing MVP to GA.

Technical Leader / Full Stack Engineer (Sep 2020 – May 2022) - Teckbond.com Engineering Team

- Led 10 engineers to build chip community platform (Spring Boot + Vue, microservices). Replaced monolith → horizontal scaling.
- Integrated Elasticsearch: API p99 latency from 2s+ → 200ms-.
- Refactored architecture to meet China cybersecurity level protection (MLPS) standards.
- Achieved 99.99% availability.

Full Stack Engineer (Apr 2022 – Now) - Azure Orcas Team

- Lead MySQL portal extension; migrated Knockout to React (reducing bundle size 30%, improving render performance).
- Packaged core extension as reusable npm library, adopted by 4+ Azure resource teams.
- Maintain 99.99% SLA; on-call rotation handling global incidents with root cause analysis and fix scheduling.
- Benchmarked against AWS RDS to ship Start/Stop, MFA, geo-redundant backup.

PROJECT EXPERIENCE

Ly.com Flight Ticket Backend System (Feb 2014 – Nov 2015)

Technology Stack

ASP.NET MVC, Quartz job, MSSQL, Javascript, MongoDB, Redis

Project Overview

The flight ticket backend system comprises an order processing service, customer order management system, log management service, and scheduled task management system. It is built on foundational technologies such as ASP.NET MVC, Quartz Job, MSSQL, and JavaScript. This hybrid project encompasses a REST API Service, Frontend System, Monitor System, and Job System, supporting nearly 100,000 daily transactions during peak periods of the flight ticket business.

Key Responsibilities & Achievements

- Served as the owner of the post-processing workflow, responsible for gathering requirements from customer service and collaborating with product managers to drive monthly system updates.
- Refactored the legacy architecture of the customer order management system by decoupling the traditional ASP.NET frontend-backend mixed logic, restructuring code layers based on business logic to improve maintainability.
- Integrated a high-availability deployment pipeline by integrating Jenkins and Git for automated releases, achieving 99.99% system availability.
- Evolved the order system from a single-service to a horizontally scalable multi-service architecture, using MongoDB and Redis for data sharing across services.
- Tracked user-reported system bugs and appropriately scheduled them into monthly release plans.

Microsoft Windows Update Content Management Team (Sep 2016 – Mar 2018)

Technology Stack

ASP.NET MVC, Quartz job, MSSQL, Javascript

Project Overview

The document management system includes a document management module and a scheduled task system, supporting multi-language documentation and version management of Windows update files.

Key Responsibilities & Achievements

- Led a multi-developer team to communicate requirements with product managers and documentation engineers.
- Refactored legacy architectural issues by decoupling frontend and backend logic.
- Drove integration of the document management system with Microsoft public documentation services, improving document delivery efficiency.
- Improved multi-threading capabilities of scheduled tasks, enhancing overall system efficiency in large file processing.

Azure MySQL Team – Engineering System (Apr 2018 – Jan 2021)

Technology Stack

ASP.NET, PowerShell, C++, Test framework, Azure Devops, Pipeline, Power BI

Project Overview

The Azure MySQL Engineering System encompasses all key services for bringing open-source MySQL to Azure as a resource. This includes the frontend site of Azure portal for MySQL, backend resource provider services, DevOps pipelines, the core MySQL engine and components, as well as related availability testing, performance testing, and stress testing.

Key Responsibilities & Achievements

- Communicated requirements with project managers to drive monthly frontend feature updates for the Azure portal.
- Improved the stability of the team's code check-in by iterating on Azure DevOps pipelines.
- Participated in the incubation project Azure Blockchain Service as the frontend lead, successfully bringing the project to production.
- Enhanced the stability of MySQL running on the underlying framework through improvements to the testing framework.

Teckbond.com Engineering Team (Sep 2020 – May 2022)

Technology Stack

Vue, Java, Sprint boot, Docker, Elasticsearch, Jenkins, MySQL, Redis, QuartzJob, Kafka

Project Overview

Teckbond.com is a community platform for a chip company, encompassing a frontend community system, backend management system, community content search service, scheduled task system, distributed microservices, and Jenkins CI/CD services.

Key Responsibilities & Achievements

- Led a team of 10, communicating with clients on requirements and practicing weekly iterative agile development.
- Introduced an Elasticsearch-based content search service to replace the legacy service, improving community search performance; API response time reduced from seconds to milliseconds.
- Refactored the system architecture to comply with national cybersecurity level protection standards.
- Introduced distributed microservices architecture to replace the original monolithic design, enabling horizontal scaling and achieving 99.99% availability.
- Led the decoupling of the backend management system into frontend and backend, adopting Vue and Java Spring Boot for a more modern design, improving overall efficiency and work experience of the customer service team.

Azure Orcas Team (Apr 2022 – Now)

Technology Stack

ASP.NET MVC, TypeScript, React, Mocha, Azure services (VNet, KeyVault, Private endpoint, AAD), ARM (Azure resource management), Azure Devops

Project Overview

Azure portal general available experience for fully managed open-source database service for PostgreSQL, MySQL and Hyperscale Citus.

Key Responsibilities & Achievements

- Served as the lead developer of the MySQL extension.
 - Communicated with PMs to align requirements and maintained biweekly feature iterations.
 - Led the migration of the Azure portal for MySQL extension from Knockout to React.
 - Participated in monthly support/oncall rotations, responsible for handling global Azure MySQL incidents, coordinating with engineers and support teams to track issues, documenting necessary system bugs, and scheduling fix plans.
 - Benchmarked against AWS and other successful products in the market to introduce experience-enhancing features such as resource Start/Stop, multi-factor authentication, and geo-redundant backup.
 - Managed Azure DevOps CI/CD pipelines to achieve full automation of development, testing, and release processes.
 - Packaged the core capabilities of the MySQL portal extension as an npm package for use by other Azure resources.
 - Responsible for code review and establishing the system testing framework, improving system availability.
-

ADDITIONAL

- **On-call:** Monthly rotation for global Azure MySQL portal incidents, coordinating with engineering and support teams.
- **DevOps:** Managed CI/CD pipelines for 5+ services; integrated Mocha testing framework reducing regression bugs by 40%.
- **AI Tools:** Use Copilot to accelerate test generation and boilerplate code by ~30% without compromising quality.
